

CARPLAY & ANDRIOD AUTO WIRELESS CONNECTOR

Operation Manual

V6 1125

Features

- Converts Factory Wired CarPlay or Android Auto to Wireless CarPlay or Android Auto

Package Includes:

- Wireless adapter
 - USB-C to USB-A switching
 - User manual
- Input: 5V

What You Need:

- Wifi and Bluetooth enabled on your mobile device
(Please connect adapter by Bluetooth pair)
- iOS 12 or Android 11 or above mobile device OS
- Carplay or Android Auto enabled auto infotainment system (wired connection)

Setup Instructions

- Check for factory wired CarPlay or Android Auto of vehicles Plug in your phone into the car's USB port using the original factory cable. If you can use CarPlay or Android Auto, then you can upgrade to wireless connection by using the adapter,

Noted:If you are still unable to determine whether your car support wired CarPlay or Android Auto, please contact your car dealer to help

- Turn on your car and make sure your infotainment system has started up. On some vehicles you may need to fully turn on the engine for the system to initialize.
- Choose the correct cord for the infotainment data port of your car (Note: Your car may have more than one USB port, some may only have power for charging. Make sure you plug into the one that connects to your car's system.)
- Plug the USB-A side into the adapter and using the proper cord plug into your car's infotainment system USB data port.
- On your mobile device, open your Bluetooth settings and scan for available nearby devices.

If you don't see the guiding screen, you can try to skip this step and proceed directly to the following steps for connection.

Noted:It is recommended that Android phone users complete the Bluetooth pairing within 30 seconds. If it takes longer than 30 seconds, it is suggested to unplug and replug the adapter and then re-pair the Bluetooth.

- Find "Smartbox-XXXX" in the list and click it to pair.

- As the products connect together, you will be prompted on your mobile device to accept the pairing.
- The product will now use both Bluetooth and Wifi to make secure and strong connections between your phone, and the adapter, and your car's infotainment system.
- NOTE: Please allow a few minutes without pressing any additional buttons for the system to initialize.
- Once complete, You may need to select the icon on your screen to enter CarPlay or Android Auto mode.
- You can now use your car's screen to control CarPlay or Android Auto features!
 - You can also still use your phone while connected! If you set up directions in Maps on your phone, it will automatically move those directions to your car's screen.
 - See more info on how to use CarPlay and Android Auto on their respective websites
